HOSPITAL SECURE®

HOSPITAL SECURE® helps you protect doctors and staff both within and around your facility—it's like having 911 in the palm of every employee's hand!

HOSPITAL SECURE® combines proprietary software with interference-free wireless transmitters and receivers to protect people in your zone of protection 24 hours a day, 7 days a week. The hand-held personal alarm locator (PAL) allows holders to request help at the touch of a button. A small transmitter inside the PAL alerts your Security Department personnel within seconds so they can respond faster and more effectively.

HOSPITAL SECURE® is especially helpful in high-traffic Emergency Rooms, Substance Abuse Units and Mental Health Units; where doctors and staff may have one-to-one contact with patients. With the PAL, staff can discreetly request assistance without the patient's knowledge.

- **Alarm activation within seconds pinpoints the user's location, identity and crucial medical data**
- **When triggered, PAL automatic tracks user's movements, indoors or out**
- **Deters crime within your established zone of protection, indoors and out**
- **Protects 24 hours a day, 7 days a week**
- **Optional enhancements: MOBILE LINK® equips patrol cars with a complete PERSONAL SECURE® computer system; Equipment PAL protects stationary assets;**

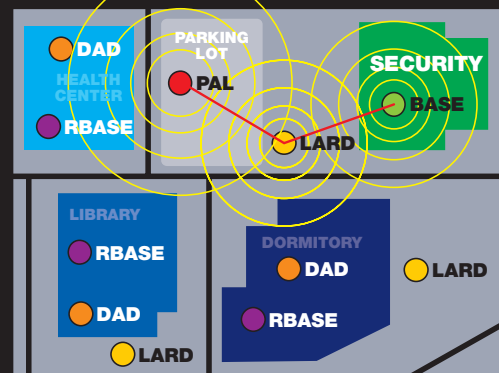

*When safety is your first concern,
